📍 Champlin, MN

Full Stack Software Engineer

8+ years of experience building scalable web and mobile platforms across fintech, legal tech, and SaaS. Proponent of AI-assisted development to accelerate delivery, improve code quality, and reduce cognitive load, while maintaining strong engineering standards through testing, reviews, and system design. Seeking a next opportunity as an AI-forward individual contributor where I can build production systems, leverage AI tooling in day-to-day development, and help engineers around me grow through mentorship, collaboration, and technical leadership.

Experience

Total Expert

Staff Software Engineer | Mar 2025 – Dec 2025

Tech: Vue, PHP, C#, MySQL, Postgres, DynamoDB

- Architected the future-state content asset management system, creating a unified and consistent end-user experience.
- Led development of a first-class third-party integration enabling scalable content creation workflows.
- Drove frontend standards as Lead of the Frontend Guild, aligning teams on best practices and architecture.
- Interviewed and evaluated candidates for engineering and management roles.
- Decomposed a legacy PHP monolith into C# microservices to improve scalability and maintainability.
- Leveraged AI coding assistants (including Claude) in day-to-day Staff IC work for rapid prototyping, refactoring, test generation, and design iteration, while enforcing strict review and production-quality standards.

Lead Software Engineer | Jan 2024 – Mar 2025

- Led and mentored a team of 3 engineers, coaching them on technical leadership and project ownership.
- Introduced shorter on-call rotations and regular retrospectives, improving team morale and delivery consistency.
- Improved frontend reliability and testability by enforcing testing standards in pull requests.

- Created reusable frontend repository templates, increasing development velocity across teams.
- Led a cross-team initiative involving 4 internal teams and a third-party vendor, delivering on schedule.
- Partnered closely with Product Management to prioritize customer-value-driven initiatives.
- Reduced AWS microservice costs by 75% and storage costs by 92% through architectural and usage optimizations.
- Delivered department-wide and cross-department technical presentations.

Senior Software Engineer | Nov 2020 – Jan 2024

- Modernized and maintained social media integrations, managing external developer accounts.
- Split a frontend monolith into modular applications, reducing build and deployment times by 75%.
- Supported migration from PHP 7.4 to PHP 8, improving performance and long-term maintainability.
- Led frontend development of a Data Importer tool used across the organization.
- Designed and implemented a centralized deduplication service to improve data quality.

Software Engineer | Oct 2019 – Nov 2020

- Collaborated with Product and stakeholders to deliver SOW-driven features.
- Led backend development for a SKU management tool.
- Improved domain-wide rate limiting and identified opportunities to increase engineering productivity.

Tech Everyday LLC

Owner / Lead Engineer | Nov 2023 – Present

Tech: Angular, Ionic, Node, C#, Postgres

- Founded and led a consultancy with 4 engineers and 2 designers.
- Coached teams on Agile practices and the full software development lifecycle.
- Led a full website revamp using Angular, Ionic, and TypeScript.
- Led development of an iOS courier-management application using Angular, Ionic, Node, and TypeScript.
- Designed and implemented a C# backend-for-frontend REST API.
- Built an Entity-Attribute-Value REST API using .NET 7, Entity Framework, and Fly.io.
- Implemented CI/CD pipelines using GitHub Actions.

Pre-Paid Legal Services, Inc. (LegalShield)

Senior Software Engineer | Oct 2021 – Nov 2022

Tech: React, Node, C#

- Led a team of 4 engineers through delivery of their first major project.
- Transitioned the team from waterfall to Agile methodologies.
- Delivered a critical API modernization project in 6 weeks, significantly reducing initial load time.
- Maintained .NET middleware, standardized page models, and health endpoints.
- Converted frontend services from JavaScript to TypeScript and ES6.
- Collaborated with stakeholders to successfully launch MFA on schedule.
- Interviewed candidates for software engineering roles.

Software Engineer II | Jul 2021 – Oct 2021

- Contributed to an internal component library used across multiple teams.
- Maintained an AWS S3 microservice wrapper.
- Supported containerized deployments using Rancher.

Carmmunity

Consultant | Jun 2020 – Jul 2020

Tech: Angular, Node

- Contributed to a mobile application for car enthusiasts.
- Integrated Twilio Conversations to enable real-time two-way chat between users.

NovelCath

Consultant | Jan 2019 – Mar 2020

- Enabled remote work infrastructure and advised on security best practices.
- Managed IT equipment and systems.
- Set up and maintained QuickBooks server.

TempWorks Staffing Software

Software Engineer | Jun 2017 – Sep 2019

Tech: React, C#, SQL

- Built a Time Entry feature for a mobile application using React and Redux Sagas.
- Mentored a Prime Digital Academy graduate and supported implementation of facial recognition and geofencing.
- Improved local development velocity by hosting local APIs and tunneling with ngrok.
- Developed RESTful APIs in C# .NET with Entity Framework used across multiple products.

- Implemented UI for API scope management using React and Redux Thunks.
- Built autosave functionality for Year-End Tax workflows using C# and WPF.
- Automated support ticket creation via Chatlio webhooks.
- Created a proof of concept rewriting an internal ticketing system from Knockout to React.

Education

Bachelor of Science – Computer Science

Metropolitan State University

Associate of Science – Computer Science

North Hennepin Community College

Professional Development Certificates

- Application Programming
- Object-Oriented Programming

Volunteering

- Assistant Coach, CDAA Soccer (Pre-K – 2nd Grade), 2023–2024
